Robert Horvath, PhD

https://www.researchgate.net/profile/Robert_Horvath5

<https://scholar.google.com/citations?user=PUty9hcAAAAJ&hl=en>

Personal data

Date of birth: 25th of August 1974
Place of birth: Gyöngyös, Hungary
Citizenship: Hungarian
Family status: Married, 2 children (Virág Anna, Born: 2004;
Tünde Rebeka, born 2012)

Education

Sep 1999 – Sep 2000 **University of Copenhagen**
visiting PhD, Graduate School of Biophysics
, Denmark
Sep 1992 – Sep 2001 **Eötvös Loránd University**
MSc, PhD, Physics and Biophysics
Budapest, Hungary

Research Experience

- Jul 2012 – present* **Head of Nanobiosensorics Laboratory and Momentum Fellowship holder**
Hungarian Academy of Sciences, Institute of Technical Physics and Materials
Science
Budapest, Hungary
- Oct 2008 – Sep 2012* **Senior Researcher, Marie Curie and OTKA Fellowships holder**
Hungarian Academy of Sciences, Institute of Technical Physics and Materials
Science
Budapest, Hungary
- Sep 2006 – Oct 2008* **Marie Curie Postdoctoral Fellow**
Cranfield University,
Cranfield, United Kingdom
- Jan 2002 – Sep 2006* **Postdoctoral Fellow and Talent Project Award holder**
Technical University of Denmark, Risoe - Optics and Fluid Dynamics
Kongens Lyngby, Denmark

Statistics

- H-factor* 38
- Impact Factor* 500+
- Citations* 4000+

Teaching:

Modern Physical Laboratory (at Eötvös University: 1998-1999)

Optical Waveguides Laboratory (at Eötvös University: 1997-1999 and 2000-2001)

Lecture series on optical biosensing (including laboratory demonstrations)

(Montpellier University (France), 2006)

Invited lecturer at several courses at Pannon University, Technical University of Budapest and at Eötvös University in the topic of nanotechnology, nanofabrication and non-invasive biological and chemical sensors (2008 - present)

Skills & Activities

Skills Waveguides, Optics and Photonics, Biosensors, Integrated Optics, Nanofabrication, Biosensing, Applied Optics, Optical Sensing, Cell Adhesion, Diffraction, Biosensor Development, Cell-based Biosensors, Protein Adsorption, Label-Free Biosensors, Thin Films and Nanotechnology, Single-cell, Single-cell Manipulation, Robotic FluidFM

Languages Hungarian, English, Russian, Danish

Scientific Memberships Hungarian Biophysical Society - Board Member

Hungarian Vacuum Society - Member

VAEB Nanotechnology - Board Member

Biosensors – Editorial Board Member

Sensors International – Editorial Board Member

Scientific Reports - Editorial Board Member

Frontiers in Cell and Developmental Biology - Editorial Board Member

Awards, fellowship & ongoing projects:

Three-year PhD fellowship award from the Hungarian Government |

*One-year Visiting Student Fellowship from the Graduate School of Biophysics
(Copenhagen University, Denmark) |*

Two-year Talent Project Award from the Danish Technical Research Council |

*Two-year Marie Curie EIF Fellowship (OPTICELL) in association with Cranfield
University (UK) |*

Three-year OTKA PD Fellowship (2008) |

Three-year Marie Curie Reintegration Fellowship (2008) |

*Numerous travel awards to participate on conferences and advanced schools in the topics
of biophysics, optics, biomedical surfaces and stem cell research |*

*ERC Starting Independent Research Grant interview (2010, 2014) (At both times the
project application received "category A, excellent and recommended for funding |*

Bolyai Research Award for excellence (2012) |

*Momentum Research Award for Excellence from the Hungarian Academy of Sciences
(2012) |*

Award for excellence in reviewing from Sensors and Actuators B (2013) |

*All together 10+ prizes for excellence in student supervision from various Hungarian
Universities |*

Frontiers and Thematic excellence projects (NKFIH) – ongoing

Refereeing:

*Applied Physics Letters | ACS Journals | Applied Surface Science | Biosensors | Biosensors
and Bioelectronics | IEEE Sensors | Journal of Colloids and Interface Science | Journal of Optics
A | Journal of Physical Chemistry | Journal of Physics D- Applied Physics | Journal of
Micromechanics and Microengineering | Nanotechnology | Nature Communications |
Proteomics | RSC Journals | Sensors and Actuators A,B | Micromachines | Measurement
Science and Technology | New Journal of Physics | Optics Express | Various IOP journals |
PRX | Analytica Chemistry | Langmir | Various National Research Councils (OTKA,
NKFIH) and Foreign Research Councils | European Research Council | ERC Advanced and
Starting grant applications*

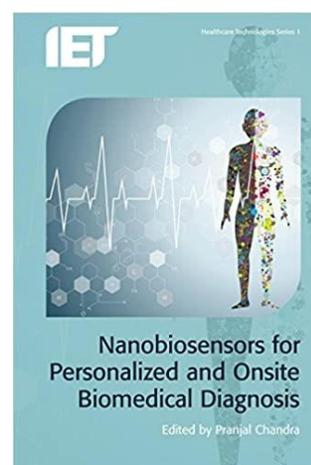

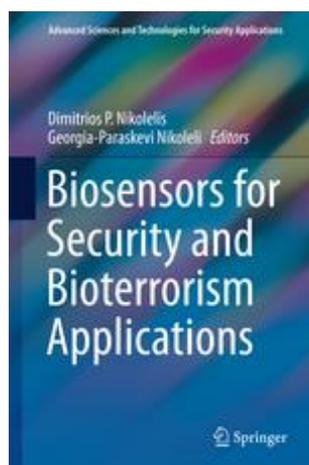

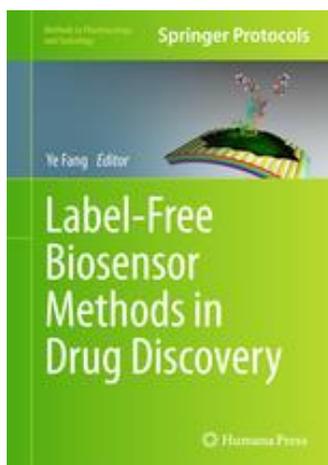

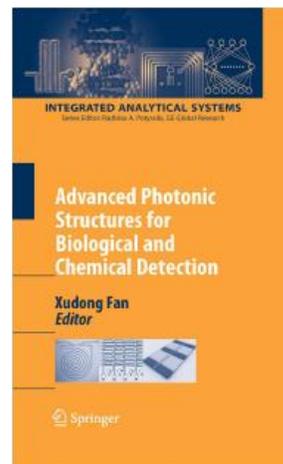

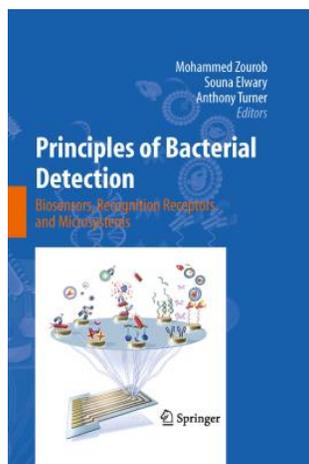

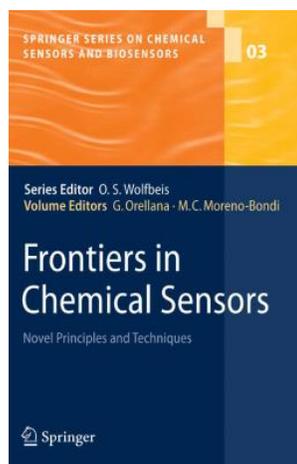

Present research interests

Robert Horvath is the founder and leader of the Nanobiosensorics Laboratory at CER HUN-REN in Budapest, Hungary. The laboratory's primary focus is on developing and applying label-free optical biosensors for proteins and living cells. In collaboration with a Swiss startup, Creoptix AG, they have developed Grating-Coupled Interferometry, a label-free optical biosensor with exceptional sensitivity that can monitor real-time binding kinetics of ions to proteins. They also develop and utilize microplate-based optical methods, specifically resonant waveguide gratings, and employ novel imaging techniques, such as quantitative phase imaging, to assess cellular adhesion on various surfaces and under external stimuli. These techniques enable the monitoring of cellular events, including adhesion, invasion, and migration, at both the single-cell and population levels, allowing for the identification and characterization of subpopulations with distinct characteristics.

Another significant area of research revolves around single-cell manipulation, which encompasses adhesion measurements on individual cells and the isolation of adhering and suspended cells for biomolecular characterization. They utilize robotic fluidic force microscopy (robotic FluidFM) and computer-controlled micropipettes in close collaboration with industry partners, including Cytosurge AG (CH) and Cellsorter Inc. (HU). With robotic FluidFM, they have the capability to inject various materials, such as metal nanoparticles and vesicles, into individual cells with a high degree of precision. Additionally, they can perform tiny cytoplasmic biopsies without harming the sampled cells. The combination of microplate-based optical sensors and robotic FluidFM has enabled them to calibrate the biosensor signals to adhesion force, opening the door to single-cell adhesion kinetic measurements with unparalleled throughput and sensitivity.

In the realm of cancer research, the laboratory initially established a methodology for determining the affinity constant and kinetic rates of integrin receptor-ligand interactions in living cells, all without the need for labeling and receptor isolation. Similarly, the laboratory made a notable discovery concerning the regulatory role of the glycocalyx layer in cancer cells during cancer cell adhesion and nanoparticle uptake. These findings have the potential for further applications in biotechnology, nanomedicine, medical diagnostics, and basic biological research.
